CoolKote is a patented solar control product.

**Remember  
those Summers  
when the Sun's  
heat went  
through  
the roof!**

**COOLKOTE®**  
SOLAR COATINGS FOR CONSERVATORIES

# Next summer KEEP COOL!

## YOUR CONSERVATORY IS A VERY EFFECTIVE HEAT TRAP...

...the same could be said of rooflights in factories. As the sun blazes down on the roof, the temperature goes through it! In recent summers mid-afternoon heat can be unbearable for you, your family or staff and even your plants.

## NO EFFECTIVE ANSWER TO THE STIFLING HEAT BUILD-UP.

Until now, there was no effective solution to this problem. Roller and pleated roof blinds provide shade, but can attract dust and insects, and are difficult to clean, whilst the heat still penetrates the fabric, which then filters through to the interior.

“ The heat and glare were unbearable, but with CoolKote we can sit in comfort ”

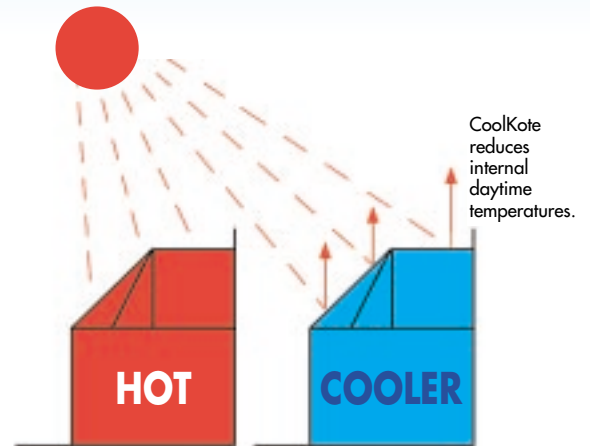

## COOLKOTE ...HOW IT WORKS.

CoolKote is a high-performance metallised PVC coating, which when applied to polycarbonate or glass roofs prevents heat building up simply by reflecting the sun's heat away before it can be transmitted inside.

## COOLKOTE SOLVES PROBLEMS

You will benefit from an immediate reduction in internal daytime temperatures and less glare, whilst an ultra-violet barrier helps prevent fading and sun damage to furnishings. CoolKote is inexpensive, effective and is applied quickly, cleanly and with the minimum of disruption to your existing polycarbonate or glass roof by members of a national network of highly trained professional installers.

CoolKote protected conservatory roof reflects the sun's heat before it can be transmitted.

Please note:

To further add to your comfort and protection Coolkote also offer a range of Solar Control Window Films.
